

Artificial Intelligence (AI) is a field of computer science that focuses on creating systems capable of performing tasks that normally require human intelligence. These tasks include understanding natural language, recognizing patterns, solving problems, and making decisions.

AI can be categorized into narrow AI, which is designed for a specific task, and general AI, which aims to perform any intellectual task a human can. Some common applications include virtual assistants, recommendation systems, and autonomous vehicles.

The development of AI continues to accelerate, bringing both exciting opportunities and ethical challenges.
